Kaymie Johnston is a Board-Certified Family Nurse Practitioner, working with The Center for Education and Training in Infection Prevention (CETIP) in the Division of Infectious Diseases at the School of Medicine in the University of Louisville. Kaymie received her BSN in 2007 and her MSN in 2016 from Austin Peay State University in Clarksville, TN.

Kaymie's training and background in Public Health Nursing includes experience on local, state, federal, and international levels. Between 2008-2010, she worked for the Tennessee Department of Health which paved the way for an opportunity with the federal government beginning in August 2010. Her experience includes work stateside at Ft. Campbell Army base in Kentucky as well as abroad as an Army Public Health Nurse in the U.S. Army Health Clinic in Vilseck, Germany. In that role, she was responsible for health risk assessments in Army communities, planning and implementing health programs to monitor the spread of disease, promoting overall health and well-being, and raising public awareness for good health while positively impacting the quality of life for United States Soldiers and their families stationed in Europe. Additionally, Kaymie has developed and provided educational outreach services to military personnel and families, including maintaining general good health, prevention, detection, and the resolution of public health issues and concerns.

During the beginning of the COVID-19 pandemic, her role was vital in caring for the military population by working with international leadership and the military community to monitor the spread of COVID-19. She acted as a liaison with the community to local/state public health officials, schools, and public affairs offices to facilitate dissemination of health-related information. She collaborated with other medical personnel on preventing the spread of COVID-19 within the community. She established activities designed to promote, protect, and restore the health of those in the military community. Following her relocation stateside, she began work with the University of Louisville Center for Education and Training in Infection Prevention. Using her public health and primary care skills, she has been responsible for planning, developing, implementing and evaluating programs for healthcare personnel as part of COVID-19 and broad infection prevention and control response.
